ABOUT US

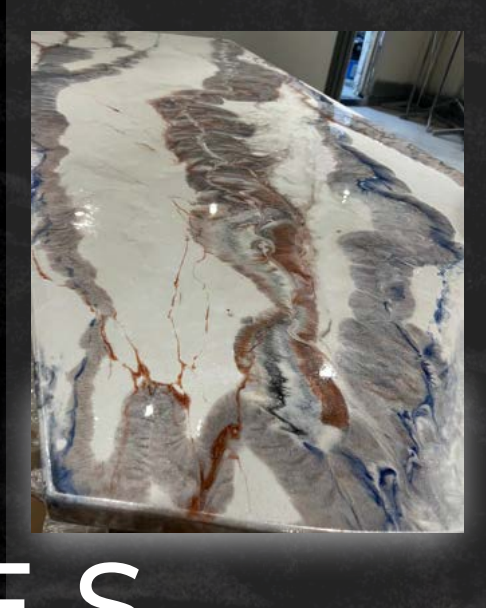

AT RESIN EPOXY DESIGNS (R.E.D.), WE PROVIDE EPOXY RESIN AND STONEFLECKS™ SOLUTIONS FOR WORKTOP RESURFACING IN THE SOUTH EAST OF ENGLAND.

Our team is dedicated to providing high-quality and durable worktops that will last for years to come.

Excited by the growing popularity of epoxy resin in the UK, we bring our expertise and knowledge to the market. We've honed our skills by learning from industry leaders, including training at Hawk University in the USA. We are committed to staying updated on the latest trends and techniques in the field.

At R.E.D we are passionate about what we do and take great pride in our work. If you're looking to give your worktops a whole new look, we are the right choice for you.

OUR SERVICES

Our worktop resurfacing services include resin epoxy coatings and Stoneflecks™ finishes, providing a variety of design options to meet your specific needs and budget. We can resurface over tiles, granite, marble and laminate so if you don't want the hassle of a new worktop or are environmentally conscious then this is a great solution for you.

STONEFLECKS™

EPOXY RESIN

BENEFITS OF WORKTOP REFINISHING

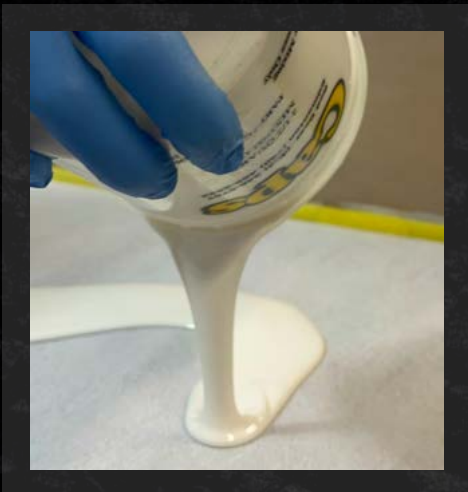

1 • One of the great benefits of using epoxy resin worktops in your home is that it allows you to bring personality, style, and character into your living space. Unlike other materials, every epoxy resin product is unique, so you can be sure that your design will be one-of-a-kind. Whether you're looking to create a bold statement or a subtle touch of elegance, this versatile material allows you to customise your worktops, splash backs and most surfaces to reflect your personal style and taste.

BENEFITS OF WORKTOP REFINISHING

2 • Another great benefit of using epoxy resin worktops in your home is its strength and durability. Compared to other materials, epoxy resin is much more robust and can withstand heavy usage. Its shock and water resistance make it an ideal product for everyday use in your home, making it a perfect choice for your kitchen worktop. Additionally, the heat-resistant properties of epoxy resin means that it can be safely used as a splashback behind your kitchen stove, providing you with a safe and practical option that can withstand the heat generated by your cooking.

3 • Epoxy resin worktops are also an ideal choice for kitchen use due to their antibacterial properties. This makes them safe for food preparation and keeps kitchen surfaces clean and hygienic.

4 • Epoxy resin offers a seamless finish with a continuous pattern and texture, eliminating the need to worry about tile divisions and blocks, creating a cohesive and durable design.

5 • Worktop resurfacing is an affordable alternative to natural stone such as granite, quartz and marble, while still offering a high-end, customisable look. Our surfaces are custom-made to fit your design needs and budget. Our unique colouring process allows for any colour combination and finish. Unlike natural stone, we are not limited by availability, slab size, or high prices. We can mimic or enhance veins and other mineral effects found in natural stone to complement any home or business, adding a versatile and dynamic element to any design.

- 6 • Another benefit of recovering your kitchen worktops is the positive impact it has on the environment. By extending the life of your worktops, you are reducing the amount of waste that ends up in landfills. Not only does this help to preserve our planet, but it also saves you money in the long run by avoiding the cost of purchasing and installing a brand new worktop. Our resurfacing service offer a sustainable solution that not only benefits the environment but also provides a fresh and updated look to your kitchen.

7 • Stoneflecks™ has several benefits, but one of its standout features is its ability to be applied directly over tiles, making it an ideal solution for recovering an existing splashback. Additionally, the direct-to-tile application of Stoneflecks™ means that the surface remains smooth and consistent, ensuring a seamless finish that looks great and is easy to clean.

8 • Another of Stoneflecks™ benefits is its ability to mimic the look of granite. With a range of colours to choose from, you can customize your splashback or worktop to achieve a high-quality, granite-like finish. The result is a functional and visually appealing addition to your kitchen or bathroom.

FAQS

Are Epoxy Resin worktops or splashbacks scratchproof?

The products we use have been rigorously tested in the labs. However, we have also conducted our testing, including a scratch test. Epoxy resin is incredibly durable and scratchproof. However, just like any other kitchen worktop material, we do not recommend cutting directly onto the surface.

Can I cover my existing worktops with an epoxy resin design?

Yes, it is possible to cover existing worktops with an epoxy resin design. In fact, the majority of our bespoke worktop installations are done over existing surfaces. Only in rare cases, where the worktop is not in suitable condition or it's a new kitchen installation, we create the worktop from scratch. The process begins with priming the surface, then we apply a unique epoxy resin design followed by a low sheen or super gloss coat finish.

Are Epoxy Resin worktops or splashbacks heatproof?

We only use the highest quality epoxy resins for our worktops and splashbacks, and as mentioned above, they are tested in the lab and by ourselves. Our splashbacks and worktops will withstand the heat of your hob and hot pans. However, like most worktops, we still advise using the usual protection on your kitchen worktop.

FAQS

Are Epoxy Resin worktops or splashbacks waterproof?

Yes, one of the many excellent properties of epoxy resin is its ability to seal and form a waterproof layer of protection.

How do Epoxy Resin worktops compare with stone worktops such as Granite, Quartz and Marble?

Epoxy resin worktops offer several benefits compared to stone worktops like granite, quartz, and marble. The most significant advantage is the vast range of colour options and the ability to design and coordinate them with your home decor. Epoxy resin worktops can mimic the natural characteristics of stone worktops but with more control over the amount and size. The use of multiple colours and special techniques can create stunning effects, including sparkles, shimmer, and metallic highlights.
